

Novozymes OdorCap[®] 5700

Protects your community standing by controlling sulfur-based odors

Objectionable odors continue to rise on the list of concerns in industrial and municipal wastewater treatment facilities due to expanding nearby communities and commercial centers. Many of these odors are from sulfur-based odors, such as hydrogen sulfide (H₂S) and mercaptans. They are detectable at extremely low concentrations and are often caused by nuisance bacteria that grow in anaerobic environments. Sulfur-based odors, like many of the issues around wastewater treatment plants, are biological problems that are often best solved with biological solutions.

OdorCap 5700: Patented biological solution for controlling sulfur-based odors like H₂S

OdorCap 5700 contains patented biological odor control technology and can degrade hydrogen sulfide, mercaptans, and volatile fatty acids. A biological odor control program using OdorCap 5700 offers superior odor prevention because it works in the same environments where odors are generated. Furthermore, it has no unintended negative impact on the biological treatment system.

The benefits of using OdorCap 5700

Lower operating costs

- Reduces spending on odor control

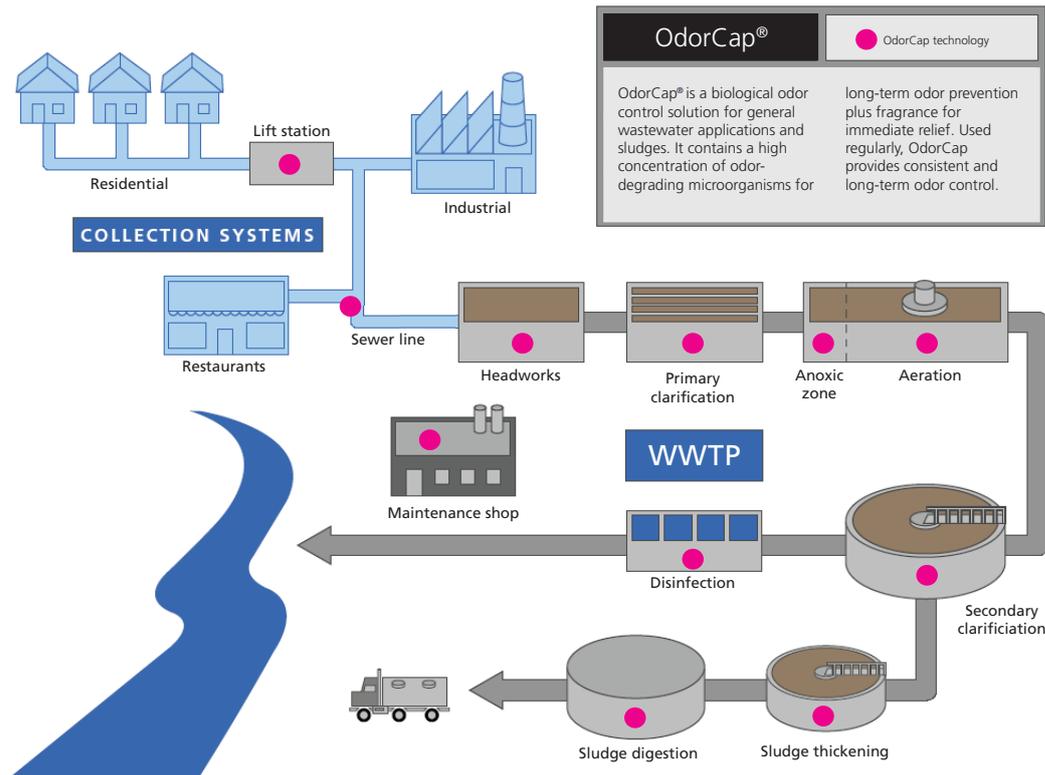

Improved plant efficiency

- Increases degradation of hydrogen sulfide and mercaptans
- Increases degradation of volatile fatty acids

Simplified operations

- Reduces odor complaints
- Works within the existing plant infrastructure

Novozymes is the world leader in bioinnovation. Together with customers across a broad array of industries we create tomorrow's industrial biosolutions, improving our customers' business and the use of our planet's resources.

Enhancing your business is our business

Team up with Novozymes for innovative biosolutions to reduce costs, improve water quality, and capitalize on renewable energy opportunities. Unique products, experience with beneficial microorganisms and enzymes, and our commitment to improve our business are just three reasons to choose Novozymes as your bioinnovation partner.
