

Wastewater Solutions

Novozymes OdorCap® 5115

## Application Sheet

OdorCap 5115 is an advanced blend of microorganisms that targets the main odors associated with wastewater treatment plants and sludge.

### Benefits

Odors in wastewater plants are an inherent part of the treatment process and come in a variety of classes, each having a different origin. Odors have the potential to become problematic, especially if the plant is in close proximity to residential or commercial areas. Controlling these odors is often necessary for maintaining a favorable reputation with the local community.

Odors are frequently the result of unintended biological processes taking place throughout the collection system and wastewater treatment plant and are often best solved using biological solutions. Chemical oxidizers are expensive and can be disruptive to the microbial community and the treatment process. Masking agents are temporary fixes and do not tackle the root of the problem. OdorCap 5115 is based on microbial degradation of a variety of odor-causing compounds. It increases the degradation of targeted odor compounds, reducing odor complaints as a result. It works within the existing plant infrastructure, is easy to apply, and helps lower the overall cost of odor control.

OdorCap 5115 contains a high concentration of odor-degrading microorganisms for long-term odor prevention as well as fragrance for immediate relief. Used regularly, OdorCap 5115 provides consistent and long-term odor control.

## Recommended use

The dosage rate for OdorCap 5115 depends on the severity and type of odor, and the flow or volume of material to be treated. It can be used at full strength or diluted as required.

## Product characteristics

OdorCap 5115 is a green liquid.

## Safety, handling, and storage

Store in a cool, dry place. Wash hands thoroughly with warm, soapy water after handling. Avoid contact with eyes.
